# Full Stack Project Extra Features

Dark Mode

This is a display option that makes the background dark and the text light. It's easier on the eyes, especially at night. You can turn it on or off depending on your preference.

Search by product name

This feature lets users find specific products quickly by typing the name into a search bar instead of scrolling through everything
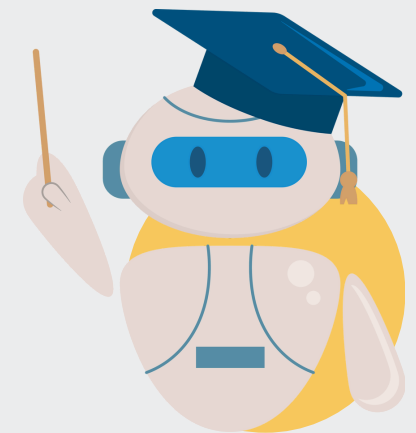

Favorite products

Users can click a heart or star icon to save the products they like. Later, they can see all their favorite items in one place.

Image upload for products

This lets the admin add a picture when adding a product. The picture helps users see what the product looks like before buying.
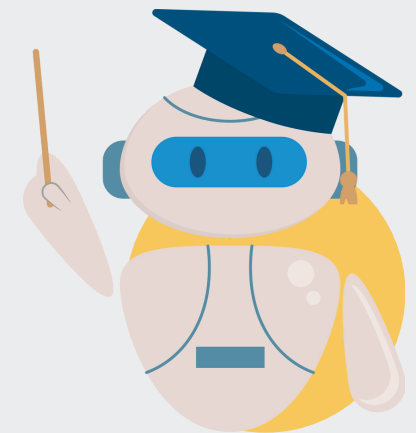

View past 'orders' stored in the DB

Users can check a list of what they ordered before. This helps them remember what they liked or want to reorder

Sign in with Google

Instead of making a new account, users can log in with their Google account in one click. It's faster and safer
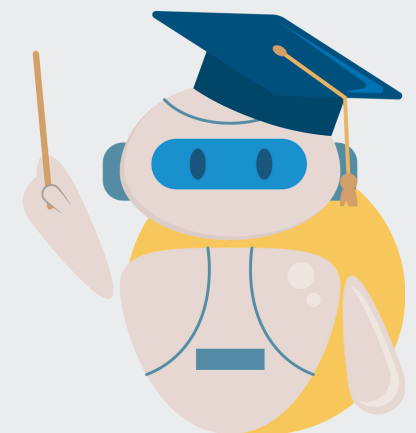

Payment gateway

This allows users to pay for their products safely online using cards or other payment methods.

Add categories for the products

Products can be grouped into categories like clothes, electronics, or food. This helps users browse by type and find things easier.

Make an admin dashboard

This is a private area for the admin (the person managing the site). Here, they can add new products, change their details, or remove them if needed.
